

## **METADATA DRIVEN INTELLIGENT DATA NAVIGATION**

### ABSTRACT OF THE DISCLOSURE

5           A system is provided for enabling a user to  
extract useful information from a collection of  
business data. Relationships that connect various  
data elements are analyzed in order to identify  
intelligent data navigation paths. The intelligent  
10 data navigation paths are utilized as a basis for  
enabling the user to move between related sets of  
data.
